

FiNDnet Operations Operational Database

The right automation tools help modern Ground Handlers deliver profitable, high-quality services to their airline clients.

FiNDnet Operations delivers a powerful Operational Database for Ground Handling Agents to manage their operation and coordinate departmental activity. Centralising, processing and distributing all flight movement and activity information, FiNDnet Operations helps you plan, coordinate and monitor your ground handling operation in real-time.

If you need to streamline your ground handling processes, provide better communication and improve operational performance, FiNDnet Operations will help you achieve your goals.

Benefits

- Simplify the coordination of all internal and external stakeholders
- Track flights and requirements to improve service delivery
- Monitor, analyse and improve operational performance
- Reduce overheads through the automation of manual tasks
- Enable growth through better utilisation of resources
- Standardise processes and reporting across all stations

FiNDnet Operations consolidates flight information from multiple feeds to provide you with a live view of your daily flight program. The latest details are automatically collated and relayed to each department, via live staff displays, ensuring all areas are kept up to date - improving communication.

Platform Support

In the control centre, the FiNDnet Workstation provides a central point for monitoring and co-ordinating the operation, updating details, relaying requests to departments and seamlessly performing messaging functions.

Post operation the system provides a comprehensive suite of Operation Analysis reports on demand, providing immediate visibility over any period.

Features

- **Flexible seasonal schedule management** with additional modelling facilities
- **Consolidation of multiple data feeds;** schedules, Type-B, airport and airline
