

LodeStone Communicator Load Control Messaging

LodeStone Communicator enables effective communication between staff at Central Load Control offices and remote stations. The advanced GUI offers common email-like features and is immediately familiar to users.

The system simplifies the exchange of information critical to the load control process between locations. Remote stations can submit data such as fuel figures, while the CLC can send information back (e.g. flight brief).

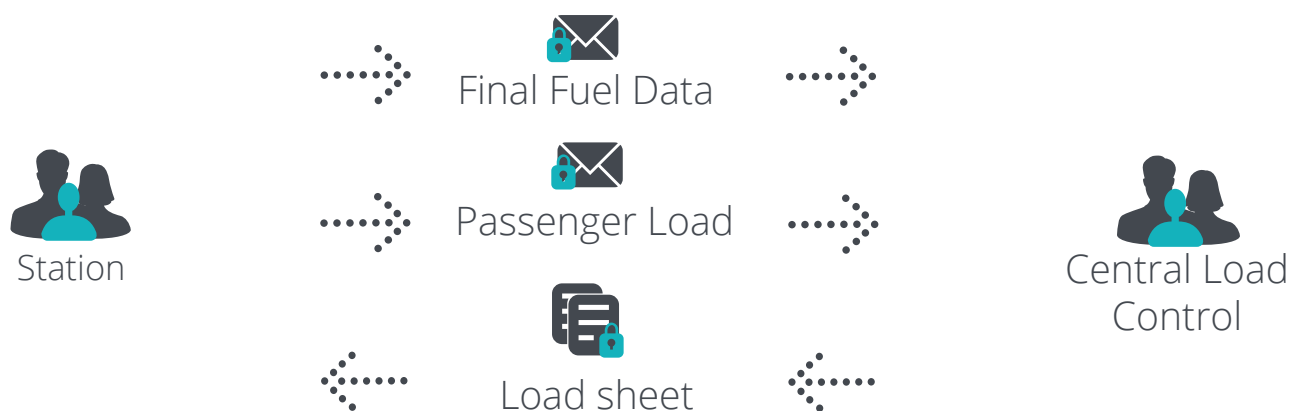

Benefits

- Savings and efficiencies through central management of processes
- Can be set up using an email gateway, reducing Type-B messaging costs
- Clear and simple to train and use
- Promotes quicker aircraft loading
- Can be used as a generic messaging tool for load control
- Better management visibility and control
- Pop-up warnings help avoid missing important messages
- Reduces errors associated with telephone and other communications
- Can be run on CUTE/CUPPS or dedicated equipment

LodeStone Communicator receives the necessary load documents from the main LodeStone application and has the familiar look and feel of the email clients we all use.

Sorting and filtering is simple, helping users to get to the information they need quickly. The system can be used to send completed Loading Instructions and Loadsheets to a remote station. Templates can be set up to save time when sending frequently-used message types.

Features

- Familiar email-client interface
- Delivers key documentation to remote stations such as:
 - Load Instruction (AHM514)
 - Loadsheet (AHM517)
- Audit trail for key messages and documentation
- Variety of information can be sent
 - Fuel Figures
 - Passenger Figures
 - Deadload Details
 - Last Minute Changes
- Integrated with Damarel's LodeStone Weight and Balance system
- Configurable message templates
