

FiNDnet Dashboards

Ground Handling Business Intelligence

As a manager of ground handling operations, you want to see what is going on across the business at a glance.

Why wait for the occasional spreadsheets when you can get an accurate view of your operation any time?

FiNDnet Dashboards provides the leaders of ground handling organisations a Business Intelligence tool for presenting highly visual overviews at the operational, management and financial level.

The task of reporting is traditionally very manual with data being taken from a range of sources. This information is then manipulated and presented in spreadsheets. How much time and cost could you save by automating this process? Imagine the strategic and operational goals that could be achieved by not spending hours on time-consuming reports.
